 - Steps/Exercise
 - Sleep Quality
 - Calories burned
- Electronic Medical Records System with open API to exchange data with the existing EMRs

*Patient, Nurse
and Physician
Friendly!*

*Select only
what you need!*

→ Clinical Benefits

- **Expanded Service Offerings** - Virtual Visits: Home healthcare companies can offer virtual consultations, enabling remote assessments, follow-ups, and care coordination without the need for in-person visits.
- **Remote Monitoring** - Virtual care platforms allow real-time tracking of patient health metrics, such as vital signs and medication adherence, enhancing proactive care management.
- **Efficient Care Coordination** - Multidisciplinary Collaboration: Virtual care facilitates communication and coordination among healthcare professionals, caregivers, and family members involved in the patient's care.

→ Financial Benefits

- **Subscription-Based Models** - Offer patients and families subscription packages for virtual care services, providing access to regular consultations, monitoring, and support.
- **Bundled Packages** - Create bundled service packages that combine in-person visits with virtual consultations, offering flexibility and cost savings to patients.
- **Specialized Consultations** - Offer specialized virtual consultations, such as telerehabilitation, wound care management, or nutrition counseling, at a premium rate.
