RIGHT CARE AT THE RIGHT TIME™

Our Services

What is Personal Health Monitoring?

Our devices allows patients to measure their own vital signs in the privacy of their homes and securely transmit the data to the care provider. This ensures that patients manage their health in accordance with their care plan. Based on the transmitted data, care providers can make timely adjustments as needed.

Based on the individual health condition, a care provider will recommend to a patient a combination of self-measurement such as:

- Blood pressure
- Blood sugar levels
- Oxygen saturation
- Heart rate
- Weight
- Exercise activities such as walking for example

Patients will be provided with measuring devices as well as a smartphone application to store and review the results.

LEADING YOU TO BETTER HEALTH

™

Virtual Care Platform

Our platform empowers people to understand and improve their health using technology and behavioral science.

Benefits

- Additional revenues - Medicare reimbursement up to \$200 per month per patient. Medicare billing is available.
- Grow your practice – with no additional overhead
- Competitive marketing advantage
- Earlier detection of health problems
- Better patient adherence
- Improved outcomes
- Fewer readmissions / ER visits
- Easy to sign up a patient
- Could be integrated with the existing EMR (optional)
- Secure, HIPPA compliant

Patient Receives

The patient receives a measuring device (such as a blood pressure cuff, or others, as determined by your condition).

- The device is very simple to use – it transfers your data securely to the platform with just one push of the button - no need to do manual tracking on paper.
- The patient receives an immediate call from their care team member or a doctor if readings are out of range.
- Monthly consultation.
- Reports can be shared with any doctor.
- No upfront cost
- 24/7 technical support on devices.
